

Additional INSTALLATION

2-leaf gate or Wicket door/Leaf **CREATIV or INITIAL range**

Installation of the latch

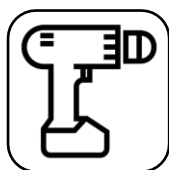

(Document reserved for installers)

Before installation

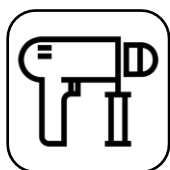

List of tools

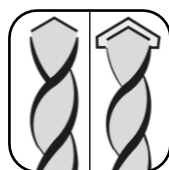

Pencil

Screwdriver with bits

Perforator

Steel/Concrete drills

Allen key (supplied)

Cruciform bit

Mallet

Installation of the latch

IMPORTANT: Do not use the inserts supplied in the latch kit
They have already been mounted on the leaf or wicket door upright

Assembling

Mount the latch on the upright, before installing the leaf or wicket door on the post.

Indeed, to access the fixing screws, the latch must be deployed and therefore you will have more difficulty installing the latch, if the product is already installed.

Note: The screws are supplied with the latch and the associated kit. Refer to the manual in the latch kit, for more information.

After the installation of the gate or wicket door/leaf:

1. Close the leaves or the wicket door/leaf.
2. Lower the latch to identify the location the central stop on the ground.
3. Perform a hole in the ground and seal the central stop.

Note: If you do not want to install it; drill in front of the latch, a hole $\varnothing 25$ mm.
